Abstract of EP1088509

Dishwasher has at least 2 spray units, circulation pump and flow control device provided with an inlet (16) and 2 outlets (17,18) coupled to the respective spray units, which are selectively blocked by a valve element (15) during operation of the circulation pump. The valve element is moved into a stable intermediate position (D,A) upon disconnection of the circulation pump, with return movement upon subsequent operation of the pump.
